Thousands of trees per acre
Thousands of trees per acre
COST = $300 to $1,500/acre
We know what to do. We need the political (financial and public) support to create a workforce capable of the task. Utilize knowledge and capabilities of tribal resources. We need to train and employ field biologist and forest management crews to get the job done. Research is needed to understand the most effective treatment strategies and to monitor actions. We need public policy support (liability, air quality, public education) to create healthy forests.
